Scalable, automatic, effective.

From object monitoring to hazard detection and risk minimisation.

Environment and infrastructures are subject to continuous changes. SwissMonitor provides systematic monitoring and documentation of these processes and helps to identify and assess hazards at an early stage, and to take appropriate measures. With its flexible surveying systems, SwissMonitor allows tailor-made solutions based on high-quality structural and geodetic data for each specific object.

Fields of Application

Dams, rock faces, excavations, sliding slopes, glaciers, buildings, roads, bridges, rail tracks, tunnels

Sensors

Total stations, GNSS, liquid levelling, crackmeters, inclinometers, shock sensors and more
