Efficient, detailed, precise. From flight planning to elevation models and orthophotos.

3D Mapping means the large-scale aerial acquisition of three-dimensional geodata. Our state-of-the-art sensors, digital aerial cameras and laser scanners provide the ideal solution – even for the most complex challenges. The acquired data serve as the basis for a wide range of tasks in planning, engineering and environmental projects.

Fields of Application

Public administration, energy, environment, roads, railways, ski resorts, mining, aviation, water supply, science
