

Engineering Surveying

Planning, Construction and Maintenance
of Infrastructural Facilities and Monitoring
of Natural Events

Flexible, innovative, reliable.

From basic data to control surveying.

Geodetic solutions for demanding infrastructural projects are our core business. Construction projects require reliable and focused solutions. Our service range covers all phases of infrastructure construction and maintenance. This includes measuring concepts, inventories, 3D models, control networks, stake-outs, construction measurements as well as control and deformation measurements. A wide range of sensors are at our disposal for monitoring natural hazards: from digital levels to laser scanners and automatic GPS monitoring systems.

Fields of Application

Roads, railways, tunnels, bridges, building construction and civil engineering, ski resorts, energy, landfills, environment, science
